Table X1

Key Concepts Explanation

General practice in Danish market

If issuers Key Concepts Explanation differs from general practice: State and explain in this column.

Residential versus commercial mortgages

Description of the difference made between residential/owner occupied and commercial properties

The Danish FSA sets guidelines for the grouping of property in categories. Property type is determined by its primary use.

Describe when you classify a property as commercial?

Property which primary purpose is owner occupation is characterised as residential. Whereas properties primarily used for commercial purposes are classified as commercial (cf. below).

The Danish FSA sets guidelines for the grouping of property in categories. Examples of application of which classifies property as commercial are:

E.g.: Private rental, Manufacturing and Manual Industries, Offices and Business, Agriculture.

- Office
- Retail/shop
- Warehouse
- Restaurants, inns etc.
- Hotels and resorts
- Congress and conference centres.
- Campsites.
- Traffic terminals, service stations, fire stations, auction and export houses.
- Agriculture
- Forestry
- Nurseries
- Ships

NPL (Non-performing loans)

Describe how you define NPLs

A loan is categorised as non-performing when a borrower neglects a payment failing to pay instalments and / or interests.

The NPL rate is calculated at different time periods after the original payment date. Standard in Table A is 90 day arrear.

Commercial bank CB issuers adhere to the Basel definition of NPL.

Explain how you distinguish between performing and nonperforming loans in the cover pool?

No distinction made. Asset substitution is not allowed for specialised mortgage banks.

Are NPLs parts of eligible assets in cover pool? Are NPL parts of non eligible assets in cover pool?

The Basel definition of NPL's is applied for commercial bank CB issuers. Asset substitution is not allowed for specialised mortgage banks, hence NPLs are part of the cover pool.

Are loans in foreclosure procedure part of eligible assets in cover pool?

For commercial bank CB issuers NPL's are eligible assets in the cover pool. Asset substitution is not allowed for specialised mortgage banks, hence loans in foreclosure are part of the cover pool.

For commercial bank CB issuers loans in foreclosure procedure are eligible assets in the cover pool.

If NPL and/or loans in foreclosure procedure are part of the covered pool which provisions are made in respect of the value of these loans in the cover pool?

The Danish FSA set rules for loss provisioning. In case of objective evidence of impairment provisioning for loss must be made.

Loan-to-Value (LTV)

[Legal framework for valuation and LTV-calculation follow the rules of the Danish FSA - Bekendtgørelse nr. 687 af 20. juni 2007](#)

Describe the method on which your LTV calculation is based

LTV is calculated on each property on a loan-by-loan basis, and takes into account prior-ranking loans at fair values relative to the estimated property value based on the most recent valuation or market value.

Fair value of the loan distributed are shown utilising LTV bracket intervals. The intervals become smaller as the percentage approaches par. This publication distributes the loan continuously from the lower LTV bracket to the upper brackets relative to fair value of the collateral. For loans where a part of the loan is covered by a guarantee from public authorities (non-profit housing) the guaranteed part is placed in the lower LTV bracket.

Example on continuously distribution into LTV brackets for a loan with fair value of 75 per cent

Frequency of collateral valuation for the purpose of calculating the LTV

This example loan will be distributed with 20 per cent of the value into the lower three brackets; 10 per cent in the fourth bracket and the remaining 5 per cent of the value in the last bracket.

Loan-to-value (distributed continuously)									
0-19.9	20-39.9	40-59.9	60-69.9	70-79.9	80-84.9	85-89.9	90-94.9	95-100	>100
